NISHANT CHAUDHARY

Frontend Engineer · React & TypeScript · Component Architecture · Performance · a11y · RFCs

New Delhi, India · +91 9560025338 · nishantchaudhary5338@gmail.com · LinkedIn · GitHub · Portfolio

CORE COMPETENCIES

Component Architecture
State Management Patterns
Frontend Performance
Accessibility (WCAG 2.2 AA)
SSR · CSR · SSG · ISR
Code Review & RFCs / ADRs

TECHNICAL SKILLS

Languages
TypeScript (strict), JavaScript (ES2023), HTML, CSS, Python, SQL

React & Frameworks
React 19, Next.js 15 App Router, Server Components, Suspense and streaming, React Router 7, Vite

Component Architecture
Design systems and tokens, headless and compound components, Radix primitives, Storybook, composition over prop drilling, Tailwind v4

State Management
RTK Query, Zustand, TanStack Query, React Hook Form with Zod, context boundaries, server versus client state

Rendering & Performance
SSR, CSR, SSG, ISR, hydration and caching strategy, Core Web Vitals (LCP, INP, CLS), code splitting, bundle and render profiling

Accessibility
WCAG 2.2 AA, WAI-ARIA, keyboard navigation, focus management, screen readers, axe, Lighthouse

Architecture & Testing
Module Federation micro-frontends, Turborepo and pnpm, Vitest, React Testing Library, Playwright, MSW, GitHub Actions

EDUCATION

MCA — Chandigarh University
Pursuing · 2023 – 2026

B.Com (Honours) — Delhi University
2013 – 2016

SPOKEN LANGUAGES

English — Professional (C1)
Hindi — Native

PROFESSIONAL SUMMARY

Frontend engineer with five years in production React and strict TypeScript, working on component architecture, state management, rendering strategy and performance at micro-frontend scale. Writes the RFCs, ADRs and review feedback behind those decisions, and holds accessibility to WCAG 2.2 AA rather than treating it as a late pass.

PROFESSIONAL EXPERIENCE

Frontend Platform Engineer — Samsung R&D Institute Delhi (via Adecco)

07/24 – Present · New Delhi

- Architected a plugin-based micro-frontend platform (Vite, Module Federation) for six product squads, cutting new-application onboarding from hours to under a minute.
- Own the shared design system: headless and compound component APIs, Radix primitives and Tailwind tokens, driving close to 60% component reuse across teams.
- Set the state-management boundaries teams follow, separating server state (RTK Query) from client state and removing the prop-drilling and duplicate-cache patterns behind most re-render complaints.
- Author the ADRs and RFCs for platform decisions and review cross-team pull requests, giving written rationale rather than verdicts.
- Diagnose performance by measurement, not inspection: traced idle CPU burn to a post-processing pass that rendered every frame regardless of the demand-mode flag every config review had passed.
- Run accessibility audits to WCAG 2.2 AA, documenting each finding with severity, reproduction steps and a prioritised fix.
- Led the legacy CRA and Webpack migration to Vite and Turborepo across the monorepo, sequenced so product teams kept shipping throughout.

Web Developer — Safex Chemicals India Pvt Ltd

03/23 – 06/24 · New Delhi

- Shipped a B2B e-commerce platform (React, Node) for 25,000+ users end to end: repeat orders rose 22% and support tickets fell around 30%.
- Built a SAP-integrated portal for 500+ users across eight departments with Azure AD, OAuth, JWT and role-based access control.

Frontend Engineer — DevsLane, Noida

11/21 – 03/23 · Noida

- Delivered eight production applications from Figma specification, raising interaction and state-coverage gaps back to designers before build.
- Built a Storybook library of 40+ accessible, keyboard-navigable primitives with documented usage rules and states.

OPEN SOURCE

dashcraft — Headless React dashboard engine under MIT: drag-and-drop grids, resizable widgets and persistent layouts behind a four-property API.

mcp-react-toolkit — Published npm package: tooling for component scaffolding, dependency and WCAG accessibility audits, and test generation.

Upstream — Merged into vercel/turborepo (#12997) and punkpeye/awesome-mcp-servers; open PRs to anthropics/skills and the Model Context Protocol TypeScript SDK.
